Information Technologies Engineer, passionate about technology and philosophy. Currently, I am seeking to create value in the areas of software development, cybersecurity, and data science. In addition to my knowledge and skills, I am eager to learn more, positively impacting my outcomes. I am convinced that, as an engineer, it is my responsibility to design not just ingenious but ethical solutions.

EXPERIENCE

BetterCloud, Mexico City: Full Stack Security Engineer 1

OCTOBER 2023 - PRESENT

I have been involved in structuring and establishing the recent software security department at the company, proposing, supporting, and guiding initiatives aimed at enhancing and maintaining software security. Simultaneously, I have worked in Scrum teams to mitigate current vulnerabilities and develop new features for clients, both on the frontend and backend, using languages such as JavaScript and Java.

Gilgamesh Data Systems, Mexico City:

Web developer Intern

NOVEMBER 2022 - MAY 2023

Upon my return to Gilgamesh Data Systems, I resumed my work, now as a Web Development Intern, seamlessly picking up where I left off and driving initiatives forward. Employing agile methodologies, I focused on two primary objectives. Firstly, I continued the task of thoroughly exploring and implementing new anti-ransomware features within the Ontap 9.11 Storage Operating System, which remained a pivotal aspect of our client presentations. Secondly, I played a significant role in the hosting and programming aspects of the company's website, ensuring both aesthetic appeal and optimal functionality to align with our business objectives.

Technology Intern

JUNE - SEPTEMBER 2021

I led the investigation, gathering, and documentation of NetApp's Ontap anti-Ransomware functionalities. I developed personalized presentations and proposals for potential clients, highlighting the solution's benefits. As a result, we achieved the renewal of a significant contract with one of the company's key clients, strengthening our position as a leader in data protection solutions. My customer-centric approach and effective proposal communication demonstrated the value of research in business success.

EDUCATION

Universidad Panamericana, Mexico City: Master in Engineering and Project Management

June 2023 - Present

Universidad Panamericana, Mexico City: Engineering in information technologies and intelligent systems

August 2019 - May 20223
